### Dredging, Management and Capping of Contaminated Sediment Disposal

### **Facility at Sha Chau**

### **Environmental Certification Sheet**

### Environmental Permit No. EP-312/2008/A

#### **Reference Document /Plan**

Document/Plan to be Certified/ Verified:	Monthly EM&A Report for Contaminated Mud Pits to the East of Sha Chau – October 2022
Date of Report:	10 November 2022
Date prepared by ET:	10 November 2022
Date received by IA:	10 November 2022

#### **Reference EP Condition**

Environmental Permit Condition:

Condition 3.4 of EP-312/2008/A:

4 hard copies and 1 electronic copy of monthly EM&A Report shall be submitted to the Director within 10 working days after the end of the reporting month. The EM&A Reports shall include a summary of all non-compliance (exceedances) of the environmental quality performance limits (Action and Limit Levels). The submissions shall be verified by the Independent Auditor. Additional copies of the submission shall be provided to the Director upon request by the Director.

#### **ET Certification**

I hereby certify that the above referenced document/plan complies with the above referenced condition of EP-312/2008/A.

Ir Thomas Chan, Environmental Team Leader (ETL):

Date: 10 November 2022

### **IA Verification**

I hereby verify that the above referenced document/ <del>plan</del> complies condition of EP-312/2008/A.	s with the above referenced
Mr. Jac	
Dr Wang Wen Xiong, Independent Auditor (IA):	Date: 10 November 2022

### **Issue and Revision Record**

### **1** Introduction

### 1.1 Background

The Civil Engineering and Development Department (CEDD) is managing a number of marine disposal facilities in Hong Kong waters, including the Contaminated Mud Pits (CMPs) to the East of Sha Chau (ESC) for the disposal of contaminated sediment, and various open-sea disposal grounds located to the South of Cheung Chau (SCC), East of Tung Lung Chau (ETLC) and East of Ninepins (ENP) for the disposal of uncontaminated sediment.

Environmental Permits (EPs) (Ref. No. EP-312/2008/A) was issued by the Environmental Protection Department (EPD) to the CEDD, the Permit Holder, on 28 November 2008 for the Project - Disposal of Contaminated Sediment – Dredging, Management and Capping of Sediment Disposal Facility at Sha Chau.

Under the requirements of the EP, EM&A programmes which encompass water and sediment chemistry, fisheries assessment, tissue and whole body analysis, sediment toxicity and benthic recolonisation studies as set out in the EM&A Manuals are required to be implemented. EM&A programmes have been continuously carried out during the operation of the CMPs at ESC. A review of the collection and analysis of such environmental data from the monitoring programme demonstrated that there had not been any adverse environmental impacts resulting from disposal activities.<sup>1,2</sup> The current programme will assess the impacts resulting from dredging, disposal and capping operations of CMP V.

A proposal on the change of number of sample replication of water quality and sediment monitoring as well as combination of routine water quality monitoring and water quality monitoring during capping operation was submitted to EPD and agreed by EPD on 3 December 2020. The proposed changes have been effective for the EM&A activities since December 2020. In early 2022, after implementing the Phase 1 optimisation for at least one year, a further data review was conducted. The monitoring data has been reviewed and demonstrated that the data robustness and representativeness are maintained. Therefore, a technical note presenting the data review results served as a supplementary information was submitted to EPD and presented that Phase 2 optimization of sample replication of water quality and sediment monitoring for the Project will be implemented in 2022. EPD expressed no comment on the review and note the implementation of Phase 2 optimization of sample replication on 18 May 2022, and thus this optimization has been effective for the EM&A activities since July 2022.

The latest sampling schedule is provided in Appendix A.

The present EM&A programme under Agreement No. CE 59/2020 (EP) covers the dredging, disposal and capping operations of the ESC CMP V (see **Appendix A** for the EM&A programme.) Detailed works schedule for ESC CMP V is shown in **Table 1.1**. In October 2022, the following works were undertaken:

- Disposal of contaminated mud at ESC CMP Vb; and
- Capping operations at ESC CMP Vd.

<sup>&</sup>lt;sup>1</sup> ERM (2013) Final Report. Submitted under Agreement No. CE 4/2009 (EP) Environmental Monitoring and Audit for Contaminated Mud Pit at East Sha Chau. For CEDD.

<sup>&</sup>lt;sup>2</sup> ERM (2017) Final Report. Submitted under Agreement No. CE 23/2012 (EP) Environmental Monitoring and Audit for Contaminated Mud Pits to the South of The Brothers and at East Sha Chau (2012 - 2017). For CEDD.

### Table 1.1: Works Schedule for ESC CMP V

### **1.2 Reporting Period**

This *Monthly EM&A Report for Contaminated Mud Pits to the East of Sha Chau – October 2022* covers the EM&A activities for the reporting period of October 2022 (from 1 to 31 October 2022).

### **1.3 Details of Sampling and Laboratory Testing Activities**

The following monitoring activities were undertaken for ESC CMP V during the reporting period:

- Water Column Profiling of ESC CMP Vb;
- Routine Water Quality Monitoring of ESC CMPs; and
- Pit Specific Sediment Chemistry of ESC CMP Vb.

### 1.4 Details of Outstanding Sampling or Analysis

No outstanding sampling remained for October 2022.

### 2 Brief Discussion of Monitoring Results for ESC CMP V

### 2.1 Introduction

This section presents a brief discussion of the results obtained from the following monitoring activities for ESC CMP V during the reporting period:

- Water Column Profiling of ESC CMP Vb;
- Routine Water Quality Monitoring of ESC CMPs; and
- Pit Specific Sediment Chemistry of ESC CMP Vb.

### 2.2 Water Column Profiling of ESC CMP Vb – in October 2022

Water Column Profiling was undertaken at a total of two sampling stations (Upstream and Downstream stations) on 5 October 2022. The monitoring results have been assessed for compliance with the Water Quality Objectives (WQOs) set by Environmental Protection Department (EPD). This consists of a review of the EPD routine water quality monitoring data for the wet season period (April to October) of 2011 – 2020 from stations in the North Western Water Control Zone (WCZ), where the ESC CMPs are located.<sup>3</sup> For Salinity, the averaged value obtained from the Reference (Upstream) station was used for the basis as the WQO. Levels of Dissolved Oxygen (DO) and Turbidity were also assessed for compliance with the Action and Limit Levels (see **Table B1** of **Appendix B** for details).

#### 2.2.1 In-situ Measurements

Analyses of results for October 2022 indicated that levels of Salinity, pH and DO complied with the WQOs at both Downstream and Upstream stations (**Table B2** of **Appendix B**). Levels of DO and Turbidity at all stations complied with the Action and Limit Levels (**Tables B1 and B2** of **Appendix B**).

#### 2.2.2 Laboratory Measurements for Suspended Solids (SS)

Analyses of results for October 2022 indicated that the SS level at both Downstream and Upstream stations complied with the WQO and the Action and Limit Levels (**Tables B1 and B2** of **Appendix B**).

Overall, the monitoring results indicated that the mud disposal operation at ESC CMP Vb did not appear to cause any deterioration in water quality during this reporting period.

### 2.3 Routine Water Quality Monitoring of ESC CMPs – in October 2022

Routine Water Quality Monitoring of ESC CMPs was undertaken on 6 October 2022. The monitoring results have been assessed for compliance with the WQOs (see Section 2.2 above for details). The monitoring results are shown in Tables B3 and B4 of Appendix B and Figures 1 to 10 of Appendix C. A total of sixteen (16) monitoring stations were sampled in October 2022 as shown in Figure 2.1.

<sup>&</sup>lt;sup>3</sup> http://epic.epd.gov.hk/EPICRIVER/marine/?lang=en

### 2.3.1 In-situ Measurements

Graphical presentation of the monitoring results (Temperature, DO, pH, Salinity and Turbidity) is shown in **Figures 1 to 6** of **Appendix C**. Analyses of results indicated that the levels of pH, Salinities and DO complied with the WQOs at all stations in October 2022. The levels of DO and Turbidity complied with the Action and Limit Levels at all stations (**Table B3** of **Appendix B**; **Figures 3 and 6** of **Appendix C**).

Overall, *in-situ* measurement results of the Routine Water Quality Monitoring indicated that the disposal and capping operation at ESC CMPs did not appear to cause any unacceptable impacts in water quality in October 2022.

### 2.3.2 Laboratory Measurements

Laboratory analysis of samples obtained during the reporting period indicated that the concentrations of Arsenic, Cadmium, Chromium, Copper, Mercury, Nickel and Zinc were detected in the samples at all/some stations and their concentrations of most metals and metalloids were generally similar across stations, except the concentration of Zinc which was higher at Ma Wan (MW1) station. Minor fluctuation was also observed for the concentrations of Chromium and Cadmium across the stations (**Table B4** of **Appendix B**; **Figure 7 and 8 of Appendix C**).

For nutrients, concentrations of Total Inorganic Nitrogen (TIN) were higher than the WQO (0.5 mg/L) at Reference (RFE) stations (**Table B5** of **Appendix B**; **Figure 9** of **Appendix C**). It should be noted that due to the effect of the Pearl River, the North Western WCZ has historically experienced higher levels of TIN.<sup>4</sup> Therefore, the exceedances of TIN WQO at these station is unlikely to be caused by the disposal operation at ESC CMPs. The concentration of Ammonia Nitrogen (NH<sub>3</sub>-N) was similar at all stations (**Table B5** of **Appendix B**; **Figure 9** of **Appendix C**). The concentrations of Biochemical Oxygen Demand (BOD<sub>5</sub>) were below the limit of reporting at all stations. (**Table B5** of **Appendix C**).

Analyses of results for the reporting period indicated that the SS levels complied with the wet season WQO (12.0 mg/L) and the Action and Limit Levels at most stations, except SS level was higher than the WQO at Intermediate (INE) station (**Tables B1 and B5** of **Appendix B**; **Figure 11** of **Appendix C**).

Based on the available results of the Routine Water Quality Monitoring which indicated that the disposal and capping operation at ESC CMPs did not appear to cause any unacceptable deterioration in water quality during the reporting period. Detailed statistical analysis will be presented in the Quarterly EM&A Report to investigate any spatial and temporal trends of potential concern.

### 2.4 Pit Specific Sediment Chemistry of ESC CMP Vb – in October 2022

Monitoring locations for Pit Specific Sediment Chemistry for ESC CMP Vb are shown in **Figure 2.2**. A total of six (6) monitoring stations were sampled on 7 October 2022.

The concentrations of most inorganic contaminants were lower than the Lower Chemical Exceedance Levels (LCELs) at all stations, except for Arsenic. The concentrations of Arsenic were higher than the LCEL at Near-Pit station ESC-NNCA, Pit-Edge station ESC-NECA, and Active-Pit stations ESC-NPCA, ESC-NPCB (**Figures 11 and 12** of **Appendix C**).

Whilst the average concentration of Arsenic in the Earth's crust is generally ~2mg/kg, significantly higher Arsenic concentrations (median = 14 mg/kg) have been recorded in Hong Kong's onshore

<sup>&</sup>lt;sup>4</sup> <u>http://www.epd.gov.hk/epd/misc/marine\_quality/1986-2005/textonly/eng/index.htm</u>

sediments.<sup>5</sup> It is presumed that the natural concentrations of Arsenic are similar in onshore and offshore sediments,<sup>6</sup> and relatively high Arsenic levels may thus occur throughout Hong Kong. Therefore, the LCEL exceedances of Arsenic are unlikely to be caused by the disposal operations at ESC CMP Vb but rather as a result of naturally occurring deposits.

For organic contaminants, the concentrations of Total Organic Carbon (TOC) were higher at Near-Pit station ESC-NNCA and Active-Pit station ESC-NPCB. (**Figure 13** of **Appendix C**). The concentrations of Low Molecular Weight Polycyclic Aromatic Hydrocarbons (PAHs) and the concentrations of High Molecular Weight Polycyclic Aromatic Hydrocarbons (PAHs) were higher at Active-Pit station ESC-NPCA (**Figure 14** of **Appendix C**). The concentrations of Tributyltin (TBT), Total Polychlorinated Biphenyls (PCBs), Total dichloro-diphenyl-trichloroethane (DDT) and 4,4'-dichlorodiphenyldichloroethylene (DDE) were below the limit of reporting at all stations during the reporting period.

Considering that the higher levels of Low Molecular Weight and High Molecular Weight PAHs occurred within Active-Pit stations ESC-NPCA only, there is no evidence indicating any unacceptable environmental impacts to sediment quality outside the pit area as a result of the contaminated mud disposal operations at ESC CMP Vb during the reporting period.

Statistical analysis will be undertaken and presented in the corresponding Quarterly EM&A Report to investigate whether there are any unacceptable impacts in the area caused by the contaminated mud disposal.

### 3 Future Key Issues

### 3.1 Activities Scheduled for the Next Reporting Period

The following monitoring activities will be conducted in the next reporting period of November 2022 for ESC CMP V (see **Appendix A** for the sampling schedule):

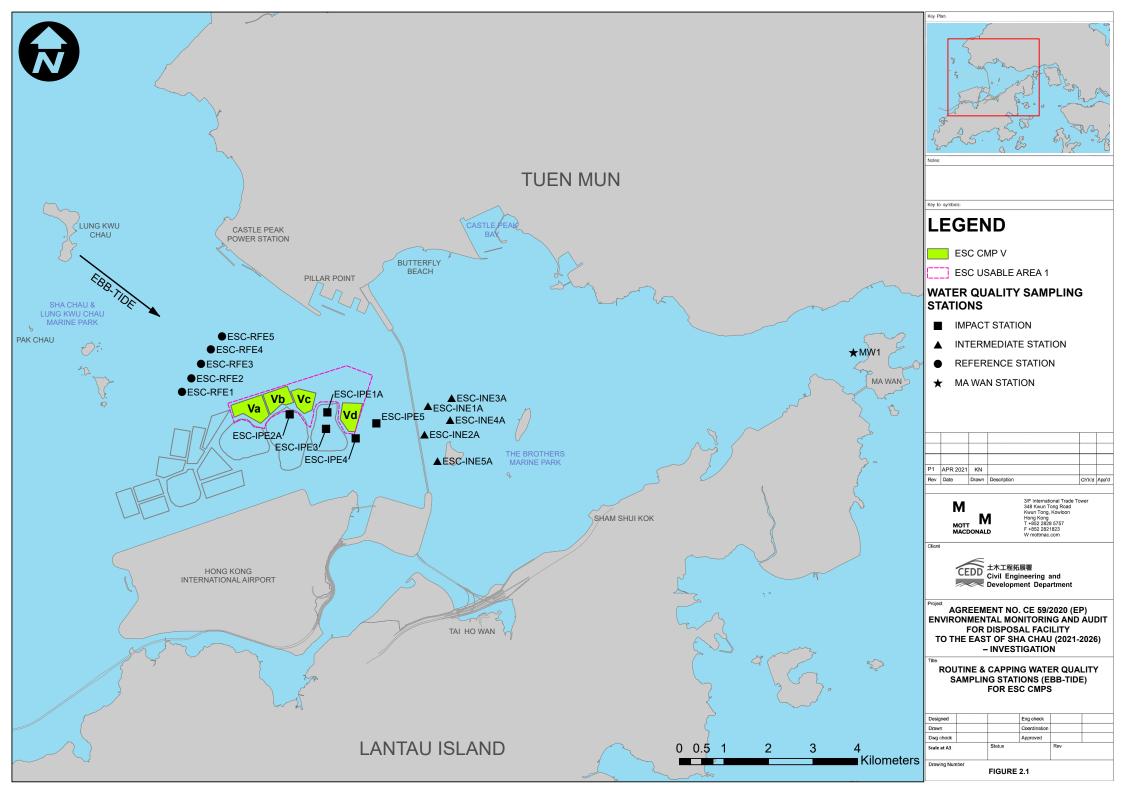

- Water Column Profiling of ESC CMP Vb;
- Routine Water Quality Monitoring of ESC CMPs; and
- Pit Specific Sediment Chemistry of ESC CMP Vb.

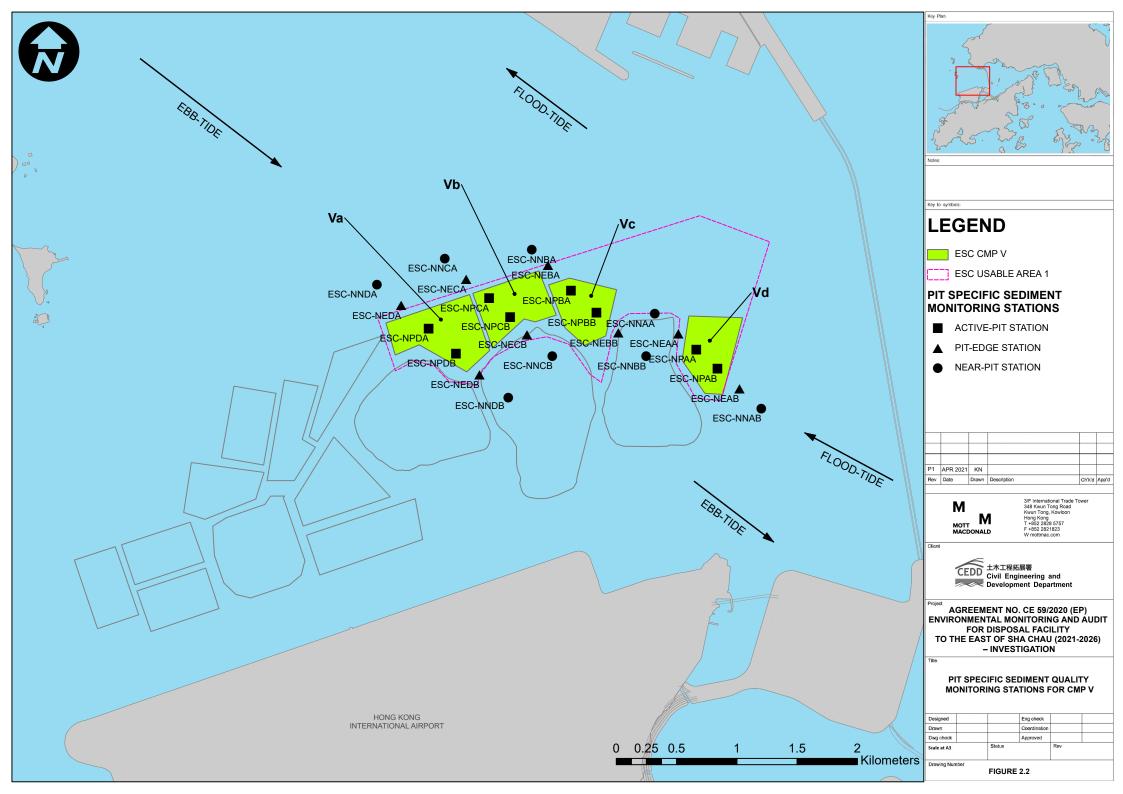

### 3.2 Study Programme

A summary of the Study Programme is presented in Appendix D.

Notes: (1) The number shown in each cell represents the numbers of replicates per monitoring station. The number shown in green bolded text represented monitoring works after the reporting period of this Monthly EM&A Report, while the number shown in black represent planned monitoring works after the reporting period of this Monthly EM&A Report, while the number shown in black represent planned monitoring works after the reporting period of this Monthly EM&A Report, while the number shown in black represent planned monitoring works after the reporting period of this Monthly EM&A Report, while the number shown in black represent planned monitoring works after the reporting period of this Monthly EM&A Report.

(2) For the planned Routine Water Quality Monitoring (i.e. the numbers of replicates per monitoring station shown in black), the monitoring will be conducted at mid-ebb OR mid-flood tide. The yearly tidal selection of this monitoring will be based on a principle to obtain 6 months monitoring data at mid-ebb, and 6 months monitoring data at mid-flood.

(3) Impact Monitoring for Dredging will be scheduled when dredging operations commence.

(4) Benthic Recolonisation Studies for CMP V will be scheduled when capping operation for CMP V is completed.

(4) Benthic Recolonisation Studies for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation for CMP V will be scheduled when capping operation was submitted to EPD and agreed by EPD on 3 December 2020. The proposed changes have been implemented for the EM&A activities since December 2020. Water Qualty Monitoring during Capping Operation and Routine Water Qualty Monitoring are combined such that Routine Water Qualty Monitoring are combined to EPD in April Disease.
 2020. Water Qualty Monitoring during Capping Operation and Routine Water Qualty Monitoring are combined so that Routine Water Qualty Monitoring are combined so that Routine Water Qualty Monitoring are combined to EPD in April 2022. Phase 2 optimization of sample replication and sachtives since July 2022.
 # Due to the logistic problem induced by the pandemic which adversely affecting the supply of international species adopted in testing programme of Sediment Toxicity Tests, as such. Sediment Toxicity Tests of ESC CMPs originally scheduled in February 2022 were postponed to March 2022.
 \* To enable the required Research Fishing Permit could be granted by the time undertaking the De

# Appendix B. Water Quality Monitoring Results

Parameters	Action	Limit
Dissolved Oxygen (DO)	Surface and Middle Depth <sup>(2)</sup>	Surface and Middle Depth <sup>(2)</sup>
in mg L <sup>-1</sup> (Surface, Middle & Bottom) <sup>(1)</sup>	5%-ile of baseline data for surface and middle layer = <b>3.76</b>	1%-ile of baseline data for surface and middle layer = $3.11^{(3)}$
	and	and
	Significantly less than the reference station's mean DO (at the same tide of the same day)	Significantly less than the reference station's mean DO (at the same tide of the same day)
	Bottom	Bottom
	5%-ile of baseline data for surface and middle layer = <b>2.96</b>	The average of the impact station readings are < 2
	and	and
	Significantly less than the reference station's mean DO (at the same tide of the same day)	Significantly less than the reference station's mean DO (at the same tide of the same day)
Suspended Solids (SS) in mg L <sup>-1</sup>	95%-ile of baseline data for depth- averaged = <b>37.88</b>	99%-ile of baseline data for depth- averaged = <b>61.92</b>
(depth-averaged) <sup>(5)</sup>	and	and
	120% of control station's SS at the same tide of the same day	130% of control station's SS at the same tide of the same day
Turbidity	95%-ile of baseline data = 28.14	99%-ile of baseline data = 38.32
in NTU	and	and
(depth-averaged) <sup>(4)(5)</sup>	120% of control station's Turbidity at the same tide of the same day	130% of control station's Turbidity at the same tide of the same day

#### Table B1: Action and Limit Levels of Water Quality for Dredging, Disposal and Capping Activities at ESC CMP V

Notes:

For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits. 1.

2. Action and Limit Levels for DO for Surface and Middle layers were calculated from the combined pool of baseline surface layer data and baseline middle layer data.

Given the Action Level for DO for Surface and Middle layers has already been lower than 4 mg L<sup>-1</sup>, it is proposed to set 3. the Limit Level at 3.11 mg L<sup>-1</sup> which is the first percentile of the baseline data.

4.

"Depth-averaged" is calculated by taking the arithmetic means of reading of all three depths. For turbidity and SS, non-compliance of the water quality limits occurs when monitoring result is higher than the limits. 5.

### Table B2: Water Column Profiling Results for ESC CMP Vb in October 2022

Station	Temp.	Salinity	Turbidity	Dissolve	ed Oxygen	рН	Suspended Solids
	(°C)	(ppt)	(NTU)	(%)	(mg L <sup>-1</sup> )		(mg L <sup>-1</sup> )
WCP 1 (Downstream)	29.59	26.17	1.02	84.26	5.55	7.87	4.0
WCP 2 (Upstream)	29.53	26.64	1.80	82.24	5.41	7.83	2.5
WQO (Wet Season)	N/A	23.98-29.30#	N/A	N/A	>4	6.5-8.5	12.0

Notes:

1. \* Not exceeding 10% of natural ambient level which is the result obtained from the Reference Station.

2. Cell shaded yellow / red indicates value exceeding the Action/Limit levels.

3. Cell shaded grey indicates value exceeding the WQO.

#### Table B3: In-situ Monitoring Results for Routine Water Quality Monitoring of ESC CMPs in October 2022

Station	Temp.	Salinity	Turbidity	Dissolve	ed Oxygen	рН
	(°C)	(ppt)	(NTU)	(%)	(mg L <sup>-1</sup> )	
RFE (Reference)	28.43	28.38	5.27	83.51	5.54	7.70
IPE (Impact)	28.14	28.50	8.76	83.75	5.58	7.49
INE (Intermediate)	28.20	28.79	11.94	80.93	5.38	7.28
Ma Wan	28.05	29.57	3.39	81.45	5.40	7.06
WQO (Wet Season)	N/A	25.55-31.22	N/A	N/A	>4	6.5-8.5

Notes:

1. \* Not exceeding 10% of natural ambient level which is the result obtained from the Reference Station.

2. Cell shaded yellow / red indicates value exceeding the Action/Limit levels.

3. Cell shaded grey indicates value exceeding the WQO.

### Table B4: Laboratory Results for Dissolved Metals and Metalloid in Routine Water Quality Monitoring of ESC CMPs in October 2022

Station	As	Cd	Cr	Cu	Pb	Hg	Ni	Ag	Zn
	(µg/L)								
RFE	1.91	0.04	0.09	0.46	ND	0.003	0.77	ND	0.15
IPE	2.07	0.04	0.11	0.56	ND	0.003	0.79	ND	0.07
INE	1.98	0.04	0.07	0.50	ND	0.003	0.72	ND	0.08
Ma Wan	1.79	0.01	0.09	0.41	ND	0.004	0.62	ND	0.31

Note:

1. "ND" indicates the concentrations of metals and metalloids are not detected.

### Table B5: Laboratory Results for Nutrients and Suspended Solid in Routine Water Quality Monitoring of ESC CMPs in October 2022

Station	NH <sub>3</sub>	TIN	BOD <sub>5</sub>	SS
	(mg/L)	(mg/L)	(mg/L)	(mg/L)
RFE	0.03	0.51	<lor< td=""><td>4.8</td></lor<>	4.8
IPE	0.03	0.48	<lor< td=""><td>10.8</td></lor<>	10.8
INE	0.04	0.48	<lor< td=""><td>16.8</td></lor<>	16.8
Ma Wan	0.07	0.45	<lor< td=""><td>5.5</td></lor<>	5.5
			Wet Seaso	WQO of TIN: 0.5 mg/L n WQO of SS: 12.0 mg/L

Notes:

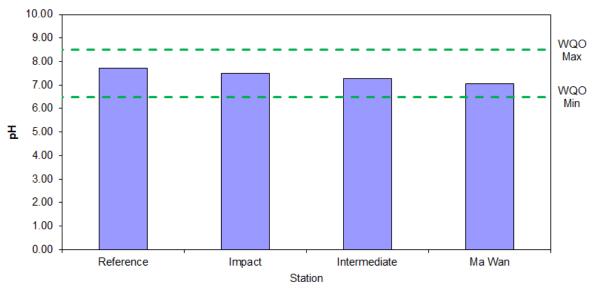

1. "<LOR" indicates the concentrations of contaminants are below the limit of reporting.

2. Cell shaded yellow / red indicates value exceeding the Action/Limit levels.

3. Cell shaded grey indicates value exceeding the WQO.
