Document/Plan to be Certified/ Verified: Monthly EM&A Report for Contaminated Mud Pits to the

East of Sha Chau - August 2024

Date of Report:

10 September 2024

Date prepared by ET:

10 September 2024

Date received by IA:

10 September 2024

Reference EP Condition

Environmental Permit Condition:

Condition 3.4 of EP-312/2008/A:

4 hard copies and 1 electronic copy of monthly EM&A Report shall be submitted to the Director within 10 working days after the end of the reporting month. The EM&A Reports shall include a summary of all non-compliance (exceedances) of the environmental quality performance limits (Action and Limit Levels). The submissions shall be verified by the Independent Auditor. Additional copies of the submission shall be provided to the Director upon request by the Director.

ET Certification

I hereby certify that the above referenced document/plan complies with the above referenced condition of EP-312/2008/A.

Ir Thomas Chan,

Environmental Team Leader (ETL): /

Date: 10 September 2024

IA Verification

I hereby verify that the above referenced document/plan complies with the above referenced condition of EP-312/2008/A.

1 Introduction

1.1 Background

The Civil Engineering and Development Department (CEDD) is managing a number of marine disposal facilities in Hong Kong waters, including the Contaminated Mud Pits (CMPs) to the East of Sha Chau (ESC) for the disposal of contaminated sediment, and various open-sea disposal grounds located to the South of Cheung Chau (SCC), East of Tung Lung Chau (ETLC) and East of Ninepins (ENP) for the disposal of uncontaminated sediment.

Environmental Permits (EPs) (Ref. No. EP-312/2008/A) was issued by the Environmental Protection Department (EPD) to the CEDD, the Permit Holder, on 28 November 2008 for the Project - Disposal of Contaminated Sediment – Dredging, Management and Capping of Sediment Disposal Facility at Sha Chau.

Under the requirements of the EP, EM&A programmes which encompass water and sediment chemistry, fisheries assessment, tissue and whole body analysis, sediment toxicity and benthic recolonisation studies as set out in the EM&A Manuals are required to be implemented. EM&A programmes have been continuously carried out during the operation of the CMPs at ESC. A review of the collection and analysis of such environmental data from the monitoring programme demonstrated that there had not been any adverse environmental impacts resulting from disposal activities. The current programme will assess the impacts resulting from dredging, disposal and capping operations of CMP V.

A proposal on the change of number of sample replication of water quality and sediment monitoring as well as combination of routine water quality monitoring and water quality monitoring during capping operation was submitted to EPD and agreed by EPD on 3 December 2020. The proposed changes have been effective for the EM&A activities since December 2020. In early 2022, after implementing the Phase 1 optimisation for at least one year, a further data review was conducted. The monitoring data has been reviewed and demonstrated that the data robustness and representativeness are maintained. Therefore, a technical note presenting the data review results served as a supplementary information was submitted to EPD and presented that Phase 2 optimization of sample replication of water quality and sediment monitoring for the Project will be implemented in 2022. EPD expressed no comment on the review and note the implementation of Phase 2 optimization of sample replication on 18 May 2022, and thus this optimization has been effective for the EM&A activities since July 2022.

The latest sampling schedule is provided in **Appendix A**.

The present EM&A programme under Agreement No. CE 59/2020 (EP) covers the dredging, disposal and capping operations of the ESC CMP V (see **Appendix A** for the EM&A programme.) Detailed works schedule for ESC CMP V is shown in **Table 1.1**. In August 2024, the following works were undertaken:

- Disposal of contaminated mud at ESC CMP Vb; and
- Capping operations at ESC CMP Vd.

¹ ERM (2013) Final Report. Submitted under Agreement No. CE 4/2009 (EP) Environmental Monitoring and Audit for Contaminated Mud Pit at East Sha Chau. For CEDD.

² ERM (2017) Final Report. Submitted under Agreement No. CE 23/2012 (EP) Environmental Monitoring and Audit for Contaminated Mud Pits to the South of The Brothers and at East Sha Chau (2012 - 2017). For CEDD.

Table 1.1: Works Schedule for ESC CMP V

1.2 Reporting Period

This Monthly EM&A Report for Contaminated Mud Pits to the East of Sha Chau – August 2024 covers the EM&A activities for the reporting period of August 2024 (from 1 to 31 August 2024).

1.3 Details of Sampling and Laboratory Testing Activities

The following monitoring activities were undertaken for ESC CMP V during the reporting period:

- Water Column Profiling of ESC CMP Vb;
- Routine Water Quality Monitoring of ESC CMPs;
- Pit Specific Sediment Chemistry of ESC CMP Vb;
- Cumulative Impact Sediment Chemistry of ESC CMPs;
- Sediment Toxicity Tests of ESC CMPs; and
- Demersal Trawling for ESC CMPs.

1.4 Details of Outstanding Sampling or Analysis

No outstanding sampling remained for the reporting month (August 2024). The following analyses are in progress and will be presented in the corresponding quarterly report:

 Species identification of the biota samples collection from Demersal Trawling for ESC CMPs in August 2024.

2 Brief Discussion of Monitoring Results for ESC CMP V

2.1 Introduction

This section presents a brief discussion of the results obtained from the following monitoring activities for ESC CMP V during the reporting period:

- Water Column Profiling of ESC CMP Vb;
- Routine Water Quality Monitoring of ESC CMPs;
- Pit Specific Sediment Chemistry of ESC CMP Vb; and
- Cumulative Impact Sediment Chemistry of ESC CMPs;
- · Sediment Toxicity Tests of ESC CMPs; and
- Demersal Trawling for ESC CMPs.

2.2 Water Column Profiling of ESC CMP Vb – in August 2024

Water Column Profiling was undertaken at a total of two sampling stations (Upstream and Downstream stations) on 7 August 2024. The monitoring results have been assessed for compliance with the Water Quality Objectives (WQOs) set by Environmental Protection Department (EPD). This consists of a review of the EPD routine water quality monitoring data for the wet season period (April to October) of 2013 – 2022 from stations in the North Western Water Control Zone (WCZ), where the ESC CMPs are located. For Salinity, the averaged value obtained from the Reference (Upstream) station was used for the basis as the WQO. Levels of Dissolved Oxygen (DO) and Turbidity were also assessed for compliance with the Action and Limit Levels (see **Table B1** of **Appendix B** for details).

2.2.1 In-situ Measurements

Analyses of results for August 2024 indicated that levels of Salinity, pH and DO complied with the WQOs at both Downstream and Upstream stations (**Table B2** of **Appendix B**). Levels of DO and Turbidity at all stations complied with the Action and Limit Levels (**Tables B1 and B2** of **Appendix B**).

2.2.2 Laboratory Measurements for Suspended Solids (SS)

Analyses of results for August 2024 indicated that the SS level at both Upstream and Downstream stations complied with the WQO and the Action and Limit Levels (**Tables B1 and B2** of **Appendix B**).

Overall, the monitoring results indicated that the mud disposal operation at ESC CMP Vb did not appear to cause any deterioration in water quality during this reporting period.

2.3 Routine Water Quality Monitoring of ESC CMPs – in August 2024

Routine Water Quality Monitoring of ESC CMPs was undertaken on 12 August 2024. The monitoring results have been assessed for compliance with the WQOs (see **Section 2.2** above for details). The monitoring results are shown in **Tables B3**, **B4 and B5** of **Appendix B** and

³ http://epic.epd.gov.hk/EPICRIVER/marine/?lang=en

Figures 1 to 11 of **Appendix C**. A total of ten (10) monitoring stations were sampled in August 2024 as shown in **Figure 2.1**.

2.3.1 In-situ Measurements

Graphical presentation of the monitoring results (Temperature, DO, pH, Salinity and Turbidity) is shown in **Figures 1 to 6** of **Appendix C**. Analyses of results indicated that the levels of pH, and DO complied with the WQOs at all stations in August 2024, except for higher levels of Salinity were recorded at Ma Wan station.

The levels of DO and Turbidity complied with the Action and Limit Levels at all stations (**Table B3** of **Appendix B**; **Figures 3 and 6** of **Appendix C**).

Overall, *in-situ* measurement results of the Routine Water Quality Monitoring indicated that the disposal and capping operation at ESC CMPs did not appear to cause any unacceptable impacts in water quality in August 2024.

2.3.2 Laboratory Measurements

Laboratory analysis of samples obtained during the reporting period indicated that the concentrations of Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Silver and Zinc were detected in the samples at some/ all stations and their concentrations were generally similar across stations; except the concentrations of Lead and Silver were only detected at Reference station; and the concentrations of Cadmium were only detected at Impact and Intermediate stations. (Table B4 of Appendix B; Figure 7 and 8 of Appendix C).

For nutrients, concentrations of Total Inorganic Nitrogen (TIN) were higher than the WQO (0.5 mg/L) at Impact and Intermediate stations. (**Table B5** of **Appendix B**; **Figure 9** of **Appendix C**). It should be noted that due to the effect of the Pearl River, the North Western WCZ has historically experienced higher levels of TIN. ⁴ Therefore, the exceedances of TIN WQO at these stations are unlikely to be caused by the disposal operation at ESC CMPs. The concentrations of Ammonia Nitrogen (NH₃-N) were below limit of reporting across all stations (**Table B5** of **Appendix B**; **Figure 9** of **Appendix C**). The concentrations of Biochemical Oxygen Demand (BOD5) were generally below reporting limit at most stations except slightly higher at Impact station. (**Table B5** of **Appendix B**; **Figure 10** of **Appendix C**)

Analyses of results for the reporting period indicated that the SS levels complied with the wet season WQO (11.9 mg/L) and Action and Limit Levels at all stations. (**Tables B1 and B5** of **Appendix B**; **Figure 11** of **Appendix C**).

Based on the available results of the Routine Water Quality Monitoring which indicated that the disposal and capping operation at ESC CMPs did not appear to cause any unacceptable deterioration in water quality during the reporting period. Detailed statistical analysis will be presented in the Quarterly EM&A Report to investigate any spatial and temporal trends of potential concern.

2.4 Pit Specific Sediment Chemistry of ESC CMP Vb – in August 2024

Monitoring locations for Pit Specific Sediment Chemistry for ESC CMP Vb are shown in **Figure 2.2**. A total of six (6) monitoring stations were sampled on 5 August 2024.

The concentrations of all inorganic contaminants were lower than the Lower Chemical Exceedance Levels (LCELs) at all stations. (**Figures 12 and 13** of **Appendix C**).

⁴ https://www.epd.gov.hk/epd/misc/marine_quality/1986-2005/eng/08_western_content.htm

For organic contaminants, the concentrations of Total Organic Carbon (TOC) were higher at Active-Pit stations ESC-NPCA and ESC-NPCB. (**Figure 14** of **Appendix C**). The concentrations of Low Molecular Weight Polycyclic Aromatic Hydrocarbons (PAHs) were higher than LCEL at Active-Pit station ESC-NPCA. (**Figures 15** of **Appendix C**).

For High Molecular Weight Polycyclic Aromatic Hydrocarbons (PAHs), the concentrations were higher than LCEL at Pit-Edge station ESC-NECA and Active-Pit station ESC-NPCA. (**Figures 15** of **Appendix C**).

The concentrations of Tributyltin (TBT) were higher at Active-Pit station ESC-NPCA. (**Figure 16** of **Appendix C**) The concentrations of Total Polychlorinated Biphenyls (PCBs), Total dichloro-diphenyl-trichloroethane (DDT) and 4,4'-dichlorodiphenyldichloroethylene (DDE) were below the limit of reporting at all stations during the reporting period.

It is observed that the high level concentrations of Low Molecular Weight and High Molecular Weight PAHs (i.e. higher than LCELs) only occurred within Pit-Edge station NECA and Active-Pit stations ESC-NPCA, but the concentrations of all inorganic contaminants were lower than the LCELs at these Pit-Edge and Active-Pit stations.

The slightly elevated level of Low Molecular Weight PAH and High Molecular Weight PAH at Pit-Edge station is possible induced by external factors rather than disposal operations. Therefore, there is no evidence indicating any unacceptable environmental impacts to sediment quality outside the pit area as a result of the contaminated mud disposal operations at ESC CMP Vb during the reporting period.

Statistical analysis will be undertaken and presented in the corresponding Quarterly EM&A Report to investigate whether there are any unacceptable impacts in the area caused by the contaminated mud disposal.

2.5 Cumulative Impact Sediment Chemistry of ESC CMPs – in August 2024

Monitoring locations for Cumulative Impact Sediment Chemistry for ESC CMPs are shown in **Figure 2.3**. A total of nine (9) monitoring stations were sampled on 6 August 2024.

Analyses of results for the Cumulative Impact Sediment Chemistry Monitoring indicated that the concentrations of all inorganic contaminants were below the LCEL at all stations during the reporting period. (**Figures 17** and **18** of **Appendix C**).

For organic contaminants, the concentration of TOC was higher at Far Field station ESC-RFB and Capped Pit stations ESC-RCA1 and ESC-RCA2. (**Figure 19** of **Appendix C**). The concentrations of Low Molecular Weight PAH were higher at Far-field station ESC-RFA and Capped Pit station ESC-RCB1. The concentration of High Molecular Weight PAHs were higher at Far-field station ESC-RFA and Capped Pit station ESC-RCB1. (**Figure 20** of **Appendix C**)

The concentrations of TBT were higher at Ma Wan station MW1. (**Figure 21** of **Appendix C**). The concentrations of Total PCBs, Total DDT, 4,4'-DDE, 2,4'-DDT, 4,4'-DDT were below the limit of reporting at all stations during the reporting period.

Overall, there is no evidence indicating any unacceptable environmental impacts to sediment quality as a result of the contaminated mud disposal operations at ESC CMP Vb during the reporting period. Statistical analysis will be undertaken and presented in the corresponding Quarterly EM&A Report to investigate whether there are any unacceptable impacts in the area caused by the contaminated mud disposal.

3 Future Key Issues

3.1 Activities Scheduled for the Next Reporting Period

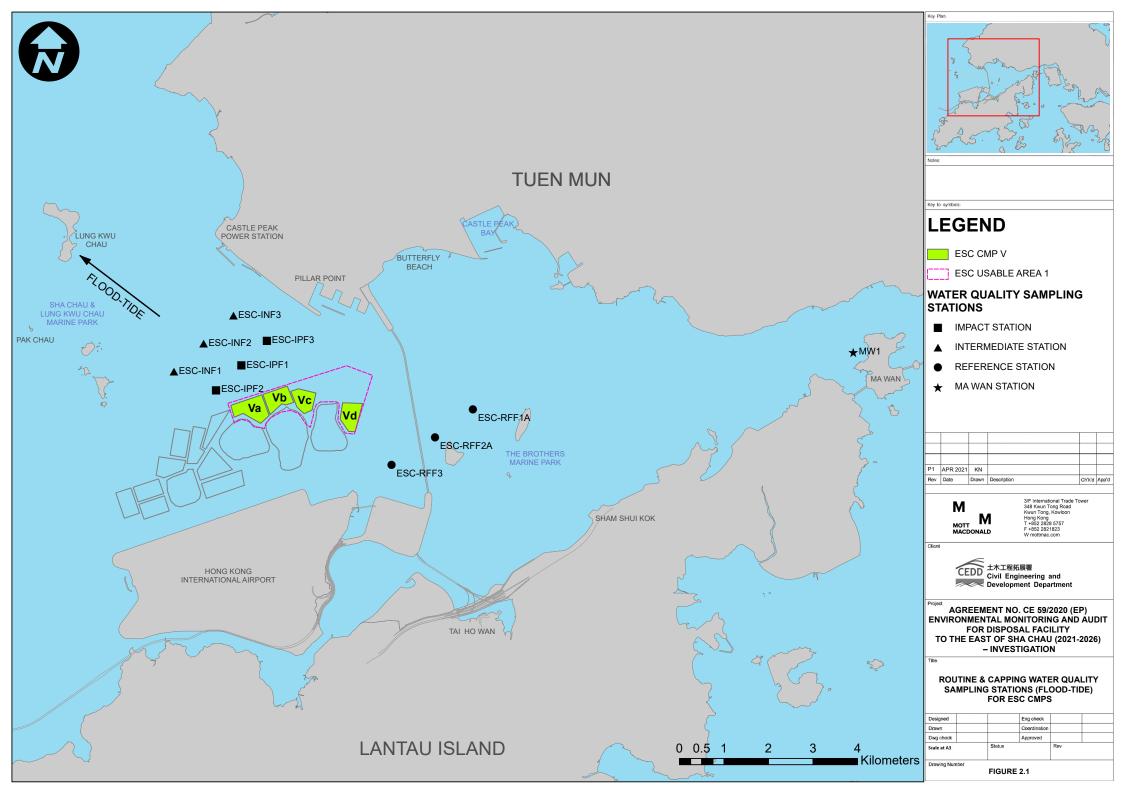

The following monitoring activities will be conducted in the next reporting period of September 2024 for ESC CMP V (see **Appendix A** for the sampling schedule):

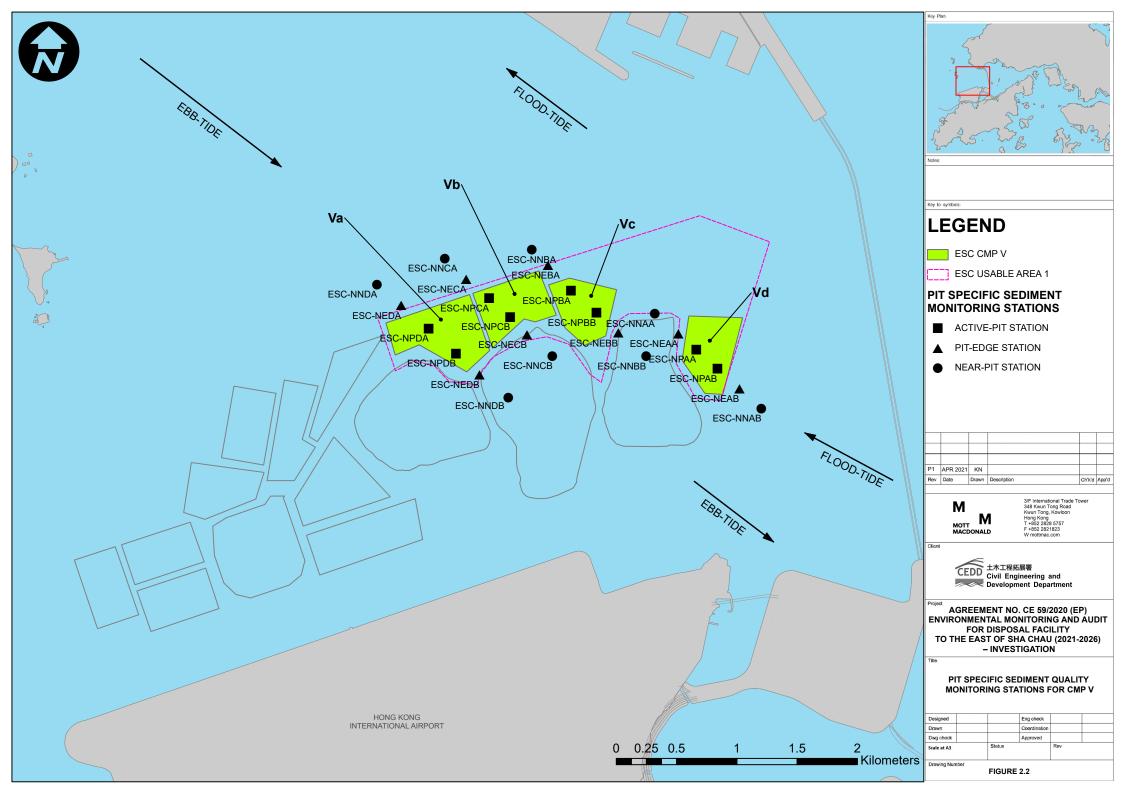

- Water Column Profiling of ESC CMP Vb;
- Routine Water Quality Monitoring of ESC CMPs; and
- Pit Specific Sediment Chemistry of ESC CMP Vb;

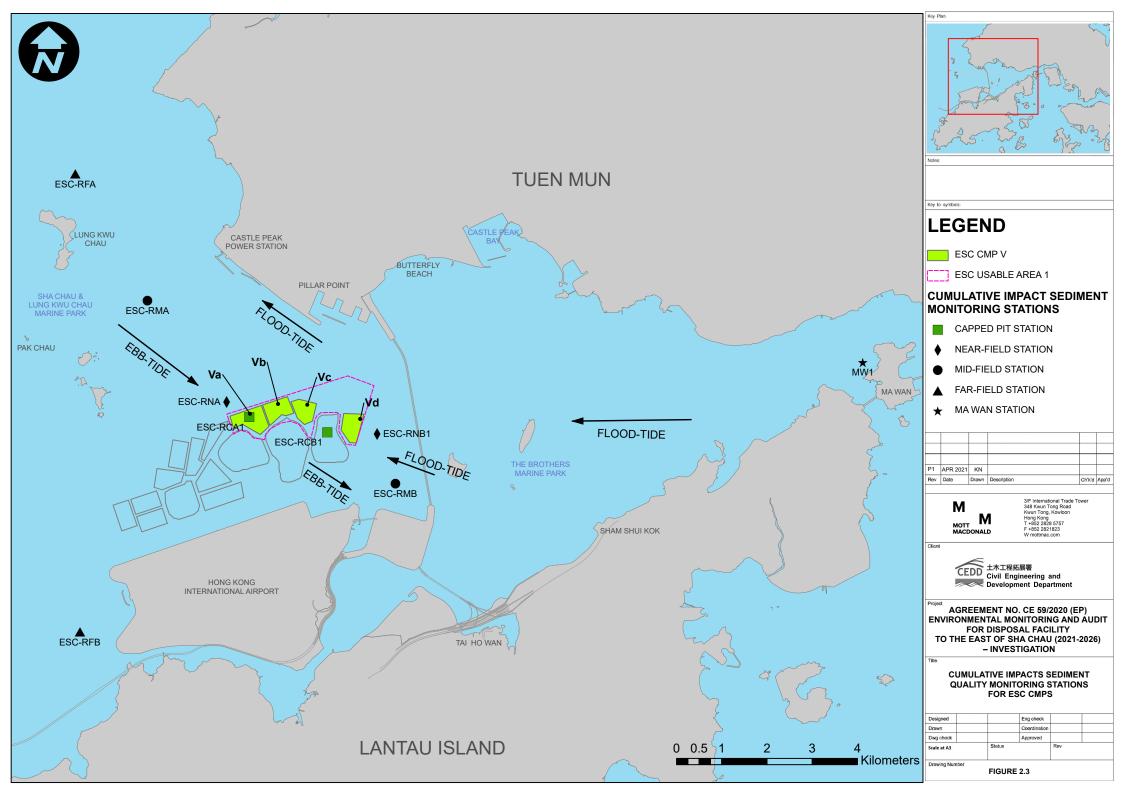

3.2 Study Programme

A summary of the Study Programme is presented in **Appendix D**.

Notes:
(1) The number shown in each cell represents the numbers of replicates per monitoring station. The number shown in green boided text represented monitoring works have been conducted before/ during the reporting period of this Monthly EM&A Report, while the number shown in black represent planned monitoring works after the reporting period of this Monthly EM&A Report, while the number shown in black represent planned monitoring works after the reporting period of this Monthly EM&A Report.

⁽²⁾ For the planned Routine Water Quality Monitoring (i.e. the numbers of replicates per monitoring station shown in black), the monitoring will be conducted at mid-ebb OR mid-flood tide. The yearly tidal selection of this monitoring will be based on a principle to obtain 6 months monitoring data at mid-ebb, and 6 months monitoring data at mid-flood.

⁽³⁾ Impact Monitoring for Dredging will be scheduled when dredging operations commence.

⁽³⁾ Impact Monitoring for Dredging will be scheduled when dredging operations commence.

(4) Benthic Recolonisation Studies for CMP V will be scheduled when capping operation for CMP V is completed.

Remarks:

* A proposal on the change of number of sample replication of water quality & sediment monitoring and combination of routine water quality monitoring during capping operation was submitted to EPD and agreed by EPD on 3 December 2020. The proposed changes have been implemented for the EM&A activities since December 2020. Water Quality Monitoring during Capping Operation and Routine Water Quality Monitoring have been conducted monthly starting in December 2020. A technical note presenting the data review results served as a supplementary information was submitted to EPD and presented that Phase 2 optimization of sample replication of water quality and sediment monitoring for the Project will be implemented in 2022 was provided to EPD in April 2022. Phase 2 optimization of sample replication in discussion of sample replication in discussion of sample replication in discussion of sample replication of water quality and adversely affecting the supply of international species adopted in testing programme of Sediment Toxicity! Tests, as such, Sediment Toxicity! Tests as such, Sediment Toxicity! Tests, as such, Sediment Toxicity! Tests, as such, Sediment Toxicity! Appendix B. Water Quality Monitoring Results

Table B1: Action and Limit Levels of Water Quality for Dredging, Disposal and Capping Activities at ESC CMP V

Parameters	Action	Limit		
Dissolved Oxygen (DO)	Surface and Middle Depth ⁽²⁾	Surface and Middle Depth ⁽²⁾		
in mg L ⁻¹ (Surface, Middle & Bottom) ⁽¹⁾	5%-ile of baseline data for surface and middle layer = 3.76	1%-ile of baseline data for surface and middle layer = 3.11 ⁽³⁾		
	and	and		
	Significantly less than the reference station's mean DO (at the same tide of the same day)	Significantly less than the reference station's mean DO (at the same tide of the same day)		
	Bottom	Bottom		
	5%-ile of baseline data for surface and middle layer = 2.96	The average of the impact station readings are < 2		
	and	and		
	Significantly less than the reference station's mean DO (at the same tide of the same day)	Significantly less than the reference station's mean DO (at the same tide of the same day)		
Suspended Solids (SS) in mg L ⁻¹	95%-ile of baseline data for depth- averaged = 37.88	99%-ile of baseline data for depth- averaged = 61.92		
(depth-averaged) ⁽⁵⁾	and	and		
	120% of control station's SS at the same tide of the same day	130% of control station's SS at the same tide of the same day		
Turbidity	95%-ile of baseline data = 28.14	99%-ile of baseline data = 38.32		
in NTU	and	and		
(depth-averaged) ⁽⁴⁾⁽⁵⁾	120% of control station's Turbidity at the same tide of the same day	130% of control station's Turbidity at the same tide of the same day		

Notes:

- 1. For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits.
- 2. Action and Limit Levels for DO for Surface and Middle layers were calculated from the combined pool of baseline surface layer data and baseline middle layer data.
- Given the Action Level for DO for Surface and Middle layers has already been lower than 4 mg L⁻¹, it is proposed to set the Limit Level at 3.11 mg L⁻¹ which is the first percentile of the baseline data.
- 4. "Depth-averaged" is calculated by taking the arithmetic means of reading of all three depths.
- 5. For turbidity and SS, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

Table B2: Water Column Profiling Results for ESC CMP Vb in August 2024

Station	Temp.	Salinity	Turbidity	Dissolved Oxygen		рН	Suspended Solids	
	(°C)	(ppt)	(NTU)	(%)	(mg L ⁻¹)		(mg L ⁻¹)	
WCP 1 (Downstream)	27.41	24.07	6.95	74.16	5.13	7.94	9.5	
WCP 2 (Upstream)	27.76	22.93	8.85	82.85	5.73	7.96	6.5	
WQO (Wet Season)	N/A	20.63-25.22#	N/A	N/A	>4	6.5-8.5	11.9	

Notes:

- 1. *Not exceeding 10% of natural ambient level which is the result obtained from the Reference Station.
- 2. Cell shaded yellow / red indicates value exceeding the Action/Limit levels.
- 3. Cell shaded grey indicates value exceeding the WQO.

Table B3: In-situ Monitoring Results for Routine Water Quality Monitoring of ESC CMPs in August 2024

Station	Temp.	Salinity	Turbidity	Dissolved Oxygen		рН
	(°C)	(ppt)	(NTU)	(%)	(mg L ⁻¹)	
RFF (Reference)	27.04	25.10	5.96	79.75	5.52	8.00
IPF (Impact)	27.42	23.48	4.11	73.58	5.11	7.97
INF (Intermediate)	27.16	24.09	4.50	69.83	4.85	7.97
Ma Wan	25.19	30.14	4.28	63.08	4.38	7.95
WQO (Wet Season)	N/A	22.59-27.61#	N/A	N/A	>4	6.5-8.5

Notes:

- 1. *Not exceeding 10% of natural ambient level which is the result obtained from the Reference Station.
- 2. Cell shaded yellow / red indicates value exceeding the Action/Limit levels.
- 3. Cell shaded grey indicates value exceeding the WQO.

Table B4: Laboratory Results for Dissolved Metals and Metalloid in Routine Water Quality Monitoring of ESC CMPs in August 2024

Station	As	Cd	Cr	Cu	Pb	Hg	Ni	Ag	Zn
	(µg/L)								
RFF	1.92	ND	0.09	0.43	0.02	0.001	0.45	0.02	0.72
IPF	1.92	0.01	0.08	0.56	ND	0.002	0.52	ND	1.04
INF	1.90	0.01	0.07	0.60	ND	0.002	0.55	ND	1.36
Ma Wan	1.61	ND	0.09	0.22	ND	0.001	0.29	ND	0.71

Note:

Table B5: Laboratory Results for Nutrients and Suspended Solid in Routine Water Quality Monitoring of ESC CMPs in August 2024

Station	NH ₃	NH ₃ TIN BOD ₅		SS
	(mg/L)	(mg/L)	(mg/L)	(mg/L)
RFF	0.01	0.44	<lor< th=""><th>9.7</th></lor<>	9.7
IPF	0.01	0.62	0.37	5.0
INF	0.02	0.62	<lor< th=""><th>5.3</th></lor<>	5.3
Ma Wan	<lor< td=""><td>0.25</td><td><lor< td=""><td>5.5</td></lor<></td></lor<>	0.25	<lor< td=""><td>5.5</td></lor<>	5.5

WQO of TIN: 0.5 mg/L Wet Season WQO of SS: 11.9 mg/L

Notes:

- 1. "<LOR" indicates the concentrations of contaminants are below the limit of reporting.
- 2. Cell shaded yellow / red indicates value exceeding the Action/Limit levels.
- 3. Cell shaded grey indicates value exceeding the WQO.

^{1. &}quot;ND" indicates the concentrations of metals and metalloids are not detected.
